

MICROSOFT DA-100

**Microsoft Analyzing Data with Microsoft Power BI Certification
Questions & Answers**

Exam Summary – Syllabus –Questions

DA-100

[Microsoft Certified - Data Analyst Associate](#)

40-60 Questions Exam – 700/1000 Cut Score – Duration of 180 minutes

Table of Contents:

Know Your DA-100 Certification Well:	2
Microsoft DA-100 Analyzing Data with Microsoft Power BI Certification Details:	2
DA-100 Syllabus:.....	3
Prepare the Data (20-25%)	3
Model the Data (25-30%)	3
Visualize the Data (20-25%)	4
Analyze the Data (10-15%).....	5
Deploy and Maintain Deliverables (10-15%).....	6
Microsoft DA-100 Sample Questions:	6
Study Guide to Crack Microsoft Analyzing Data with Microsoft Power BI DA-100 Exam:	11

Know Your DA-100 Certification Well:

The DA-100 is best suitable for candidates who want to gain knowledge in the Microsoft Power BI. Before you start your DA-100 preparation you may struggle to get all the crucial Analyzing Data with Microsoft Power BI materials like DA-100 syllabus, sample questions, study guide.

But don't worry the DA-100 PDF is here to help you prepare in a stress free manner.

The PDF is a combination of all your queries like-

- What is in the DA-100 syllabus?
- How many questions are there in the DA-100 exam?
- Which Practice test would help me to pass the DA-100 exam at the first attempt?

Passing the DA-100 exam makes you Microsoft Certified - Data Analyst Associate. Having the Analyzing Data with Microsoft Power BI certification opens multiple opportunities for you. You can grab a new job, get a higher salary or simply get recognition within your current organization.

Microsoft DA-100 Analyzing Data with Microsoft Power BI Certification Details:

Exam Name	Microsoft Certified - Data Analyst Associate
Exam Code	DA-100
Exam Price	\$165 (USD)
Duration	180 mins
Number of Questions	40-60
Passing Score	700 / 1000
Books / Training	DA-100T00-A: Analyzing Data with Power BI
Schedule Exam	Pearson VUE
Sample Questions	Analyzing Data with Microsoft Power BI Sample Questions
Practice Exam	Microsoft DA-100 Certification Practice Exam

DA-100 Syllabus:

Topic	Details
Prepare the Data (20-25%)	
Get data from different data sources	<ul style="list-style-type: none"> - identify and connect to a data source - change data source settings - select a shared dataset or create a local dataset - select a storage mode - choose an appropriate query type - identify query performance issues - use Microsoft Dataverse - use parameters - use or create a PBIDS file - use or create a data flow - connect to a dataset using the XMLA endpoint
Profile the data	<ul style="list-style-type: none"> - identify data anomalies - examine data structures - interrogate column properties - interrogate data statistics
Clean, transform, and load the data	<ul style="list-style-type: none"> - resolve inconsistencies, unexpected or null values, and data quality issues - apply user-friendly value replacements - identify and create appropriate keys for joins - evaluate and transform column data types - apply data shape transformations to table structures - combine queries - apply user-friendly naming conventions to columns and queries - leverage Advanced Editor to modify Power Query M code - configure data loading - resolve data import errors
Model the Data (25-30%)	
Design a data model	<ul style="list-style-type: none"> - define the tables - configure table and column properties - define quick measures - flatten out a parent-child hierarchy - define role-playing dimensions - define a relationship's cardinality and cross-filter direction

Topic	Details
	<ul style="list-style-type: none"> - design the data model to meet performance requirements - resolve many-to-many relationships - create a common date table - define the appropriate level of data granularity - apply or change sensitivity labels
Develop a data model	<ul style="list-style-type: none"> - apply cross-filter direction and security filtering - create calculated tables - create hierarchies - create calculated columns - implement row-level security roles - implement object-level security - set up the Q&A feature
Create measures by using DAX	<ul style="list-style-type: none"> - use DAX to build complex measures - use CALCULATE to manipulate filters - implement Time Intelligence using DAX - replace numeric columns with measures - use basic statistical functions to enhance data - create semi-additive measures
Optimize model performance	<ul style="list-style-type: none"> - remove unnecessary rows and columns - identify poorly performing measures, relationships, and visuals - improve cardinality levels by changing data types - improve cardinality levels through summarization - create and manage aggregations - use Query Diagnostics
Visualize the Data (20-25%)	
Create reports	<ul style="list-style-type: none"> - add visualization items to reports - choose an appropriate visualization type - format and configure visualizations - import a custom visual - configure conditional formatting - configure small multiples - apply slicing and filtering - add an R or Python visual - add a Smart Narrative visual - configure the report page - design and configure for accessibility - configure automatic page refresh

Topic	Details
	<ul style="list-style-type: none"> - create a paginated report - create a PivotTable from a Power BI dataset in Excel
Create dashboards	<ul style="list-style-type: none"> - set mobile view - manage tiles on a dashboard - configure data alerts - use the Q&A feature - add a dashboard theme - pin a live report page to a dashboard
Enrich reports for usability	<ul style="list-style-type: none"> - configure bookmarks - create custom tooltips - edit and configure interactions between visuals - configure navigation for a report - apply sorting - configure Sync Slicers - use the selection pane - use drillthrough and cross filter - drilldown into data using interactive visuals - export report data - design reports for mobile devices
Analyze the Data (10-15%)	
Enhance reports to expose insights	<ul style="list-style-type: none"> - apply conditional formatting - apply slicers and filters - perform top N analysis - explore statistical summary - use the Q&A visual - add a Quick Insights result to a report - create reference lines by using Analytics pane - use the Play Axis feature of a visualization - personalize visuals
Perform advanced analysis	<ul style="list-style-type: none"> - identify outliers - conduct Time Series analysis - use anomaly detection - use groupings and binnings - use the Key Influencers to explore dimensional variances - use the decomposition tree visual to break down a measure - apply AI Insights

Topic	Details
Deploy and Maintain Deliverables (10-15%)	
Manage datasets	<ul style="list-style-type: none">- configure a dataset scheduled refresh- configure row-level security group membership- provide access to datasets- configure incremental refresh settings- promote or certify Power BI datasets- identify downstream dataset dependencies- configure large dataset format
Create and manage workspaces	<ul style="list-style-type: none">- create and configure a workspace- recommend a development lifecycle strategy- assign workspace roles- configure and update a workspace app- publish, import, or update assets in a workspace- apply sensitivity labels to workspace content- use deployment pipelines- configure subscriptions- promote or certify Power BI content

Microsoft DA-100 Sample Questions:

Question: 1

You are creating a visual to show the ranking of product categories by sales revenue. Your company's security policy states that you cannot send data outside of your Microsoft Power BI tenant.

Which approach provides the widest variety of visuals while adhering to the security policy?

- a) Use only default visuals
- b) Use default or certified custom visuals
- c) Use default or any custom visuals from the marketplace
- d) Use default visuals or custom visuals uploaded from a .pbviz file

Answer: c

Question: 2

Reference Scenario: [click here](#)

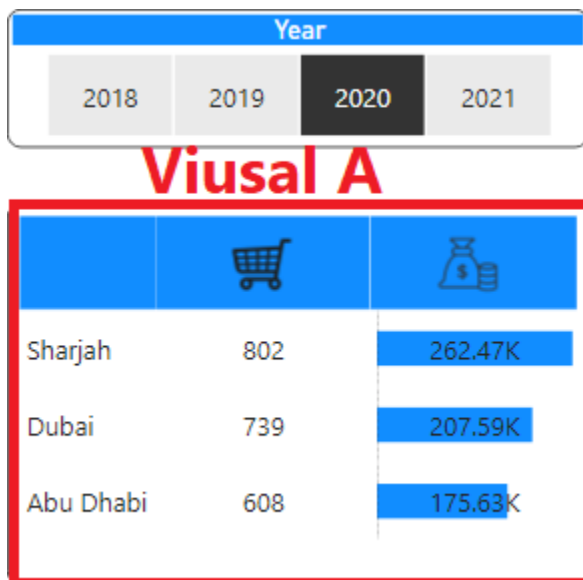

What is the minimum number of datasets and storage modes required to support the reports?

- a) two imported datasets
- b) a single Direct Query dataset
- c) two DirectQuery datasets
- d) a single imported dataset

Answer: a

Question: 3

You have a report page named Sales which contains visual A, showing total sales for each city for the selected year, as shown in the exhibit.

You need to configure an interaction for this visual. When clicking Drill through, it should redirect to a detail page that shows Sales for the selected city by Product Line and will preserve all the filters from the Sales page.

Which four actions should you perform?

Each correct answer presents part of the solution.

- a) On the Detail page, under the drill through option, add City column as the drill through field.
- b) On the Sales page, under the drill through option, add City column as the drill through field.
- c) Create a table visual named Visual B to show total sales by city and product line.
- d) On the Sales page, under the drill through option, set Keep all filters to On.
- e) Create a new page named Detail.
- f) On the Detail page, under the drill through option, set Keep all filters to On.

Answer: a, c, e, f

Question: 4

Reference Scenario: [click here](#)

You need to create a visualization that compares revenue and cost over time. Which type of visualization should you use?

- a) stacked area chart
- b) line chart
- c) donut chart
- d) waterfall chart

Answer: b

Question: 5

Reference Scenario: [click here](#)

Which DAX expression should you use to get the ending balances in the balance sheet reports?

- a) CALCULATE (SUM(BalanceSheet [BalanceAmount]), DATESQTD('Date'[Date]))
- b) CALCULATE (SUM(BalanceSheet [BalanceAmount]), LASTDATE('Date'[Date]))
- c) FIRSTNONBLANK ('Date' [Date] SUM(BalanceSheet[BalanceAmount]))
- d) CALCULATE (MAX(BalanceSheet[BalanceAmount]), LASTDATE('Date' [Date]))

Answer: a

Question: 6

Reference Scenario: [click here](#)

Which two types of visualizations can be used in the balance sheet reports to meet the reporting goals?

Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- a) a line chart that shows balances by quarter filtered to account categories that are longterm liabilities
- b) a clustered column chart that shows balances by date (x-axis) and account category (legend) without filters
- c) a clustered column chart that shows balances by quarter filtered to account categories that are long-term liabilities
- d) a pie chart that shows balances by account category without filters
- e) a ribbon chart that shows balances by quarter and accounts in the legend

Answer: a, c

Question: 7

Reference Scenario: [click here](#)

You need to provide a solution to provide the sales managers with the required access. What should you include in the solution?

- a) Create a security role that has a table filter on the Sales_Manager table where username = UserName()
- b) Create a security role that has a table filter on the Region_Manager table where sales_manager_id = UserPrincipalName()
- c) Create a security role that has a table filter on the Sales_Manager table where name = UserName()
- d) Create a security role that has a table filter on the Sales_Manager table where username = sales_manager_id.

Answer: b

Question: 8

Reference Scenario: [click here](#)

You have a large dataset that contains more than 1 million rows. The table has a datetime column named Date. You need to reduce the size of the data model.

What should you do?

- a) Round the hour of the Date column to startOfHour
- b) Change the data type of the Date column to Text
- c) Trim the Date column
- d) Split the Date column into two columns, one that contains only the time and another that contains only the date

Answer: d

Question: 9

You have a collection of reports for the HR department of your company. You need to create a visualization for the HR department that shows a historic employee counts and predicts trends during the next six months.

Which type of visualization should you use?

- a) scatter chart
- b) ribbon chart
- c) line chart
- d) key influences

Answer: d

Question: 10

What should you create to meet the reporting requirements of the sales department?

- a) a calculated measure that uses a formula of `couNTROws(Sales)`
- b) a calculated column that use a formula of `couMTA(Sales[sales_id]>`
- c) a calculated column that uses a formula of `suM(Sales[sales_id])`
- d) a measure that uses a formula of `sw-i(Sales[sales_id])`

Answer: a

Study Guide to Crack Microsoft Analyzing Data with Microsoft Power BI DA-100 Exam:

- Getting details of the DA-100 syllabus, is the first step of a study plan. This pdf is going to be of ultimate help. Completion of the syllabus is must to pass the DA-100 exam.
- Making a schedule is vital. A structured method of preparation leads to success. A candidate must plan his schedule and follow it rigorously to attain success.
- Joining the Microsoft provided training for DA-100 exam could be of much help. If there is specific training for the exam, you can discover it from the link above.
- Read from the DA-100 sample questions to gain your idea about the actual exam questions. In this PDF useful sample questions are provided to make your exam preparation easy.
- Practicing on DA-100 practice tests is must. Continuous practice will make you an expert in all syllabus areas.

Reliable Online Practice Test for DA-100 Certification

Make EduSum.com your best friend during your Analyzing Data with Microsoft Power BI exam preparation. We provide authentic practice tests for the DA-100 exam. Experts design these online practice tests, so we can offer you an exclusive experience of taking the actual DA-100 exam. We guarantee you 100% success in your first exam attempt if you continue practicing regularly. Don't bother if you don't get 100% marks in initial practice exam attempts. Just utilize the result section to know your strengths and weaknesses and prepare according to that until you get 100% with our practice tests. Our evaluation makes you confident, and you can score high in the DA-100 exam.
