Study Guide to Crack SAS Programming Fundamental	

#### Know Your A00-215 Certification Well:

The A00-215 is best suitable for candidates who want to gain knowledge in the SAS Programming. Before you start your A00-215 preparation you may struggle to get all the crucial SAS Programming Fundamentals materials like A00-215 syllabus, sample questions, study guide.

But don't worry the A00-215 PDF is here to help you prepare in a stress free manner.

The PDF is a combination of all your queries like-

- What is in the A00-215 syllabus?
- How many questions are there in the A00-215 exam?
- Which Practice test would help me to pass the A00-215 exam at the first attempt?

Passing the A00-215 exam makes you SAS Certified Associate - Programming Fundamentals Using SAS 9.4. Having the SAS Programming Fundamentals certification opens multiple opportunities for you. You can grab a new job, get a higher salary or simply get recognition within your current organization.

# A00-215 SAS Programming Fundamentals Certification Details:

Exam Name	SAS Certified Associate - Programming Fundamentals Using SAS 9.4
Exam Code	A00-215
Exam Duration	120 minutes
Exam Questions	60-65
Passing Score	68%
Exam Price	\$120 (USD)
Exam Registration	Pearson VUE
Sample Questions	SAS Programming Fundamentals Certification Sample Question
Practice Exam	SAS Programming Fundamentals Certification Practice <u>Exam</u>

# A00-215 Syllabus:

Objective	Details
Fundamental SAS Concepts	<ul> <li>Recall general rules of DATA and PROC steps.</li> <li>Recognize general rules of SAS statements including global statements.</li> <li>Interpret the SAS log.</li> <li>Distinguish between syntax and logic errors.</li> <li>Recall SAS syntax rules.</li> <li>Recognize different types of syntax errors and be able to resolve common problems.</li> <li>Recall use of the PUTLOG statement to troubleshoot logic errors.</li> </ul>
Explore SAS Data Sets	<ul> <li>Recall naming conventions used for SAS data sets and variables.</li> <li>Recognize variable types (character and numeric).</li> <li>Explain how to create and manipulate SAS date values.</li> <li>Explain how SAS stores date values.</li> <li>Recall how to use SAS date formats to specify how the values are displayed.</li> <li>Recognize how SAS stores missing data.</li> <li>Use the LIBNAME statement to read SAS data sets.</li> <li>Use PROC CONTENTS to view the descriptor portion of a data set.</li> <li>Recall how to use Data Set options: DROP=, KEEP=, RENAME=, OBS=.</li> </ul>
Using the DATA Step to Access SAS Data Sets	<ul> <li>Use the DATA statement to create one or multiple data sets.</li> <li>Use the SET statement to read a data set.</li> <li>Explain how to combine data sets.</li> <li>Use MERGE and BY statements to combine multiple data sets horizontally.</li> <li>Use the IN= option on the MERGE statement to control processing.</li> <li>Use the SET statement to combine multiple data sets vertically.</li> <li>Explain the compilation and execution process of the DATA step.</li> <li>Describe how the Program Data Vector PDV is created.</li> <li>Explain how the LENGTH statement affects the default behavior of the PDV.</li> <li>Describe the process of the data step iteration.</li> <li>Subset observations and variables.</li> <li>Use the WHERE statement to subset observations during input.</li> </ul>

Use the IF statement to subset observations during processing.  Use DROP/KEEP statements to subset variables at output and output.  Create or update variables.  Use the assignment statement to create character and numeric variables.  Recall how to assign a date constant to a variable.  Recognize SAS Functions.  Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  Use Truncation Functions: ROUND, INT.  Use Descriptive Stats Functions: MEAN, SUM.  Perform conditional processing.  Use the IF-THEN and ELSE statements.  Use the LENGTH statement for assigning byte size of character variables.  Control the output of observations.  Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  Create an accumulating variable.  Use the SUM statement.  Use BY group processing with FIRST. and LAST to accumulate in groups.  Explain the function of iterative DO loops.  Assign permanent attributes.  Use the FORMAT statement to change the display of the variable value.  Use the LABEL statement to change the display of the variable name.  Use PROC PRINT to generate a detail report.	Objective	Details
Use DROP/KEEP statements to subset variables at output and output.  Create or update variables.  Use the assignment statement to create character and numeric variables.  Recognize SAS Functions.  Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  Use Truncation Functions: ROUND, INT.  Use Descriptive Stats Functions: MEAN, SUM.  Perform conditional processing.  Use the IF-THEN and ELSE statements.  Use the IF-THEN DO and ELSE DO statements.  Use the LENGTH statement for assigning byte size of character variables.  Control the output of observations.  Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  Create an accumulating variable.  Use BY group processing with FIRST. and LAST to accumulate in groups.  Explain the function of iterative DO loops.  Assign permanent attributes.  Use the LABEL statement to change the display of the variable value.  Use the LABEL statement to change the display of the variable name.		5
Use DROP=/KEEP= options to subset variables at input and output.  Create or update variables.  Use the assignment statement to create character and numeric variables.  Recall how to assign a date constant to a variable.  Recognize SAS Functions.  Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  Use Truncation Functions: ROUND, INT.  Use Descriptive Stats Functions: MEAN, SUM.  Perform conditional processing.  Use the IF-THEN and ELSE statements.  Use the IF-THEN DO and ELSE DO statements.  Use the LENGTH statement for assigning byte size of character variables.  Control the output of observations.  Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  Create an accumulating variable.  Use the SUM statement.  Use BY group processing with FIRST. and LAST to accumulate in groups.  Explain the function of iterative DO loops.  Assign permanent attributes.  Use the LABEL statement to change the display of the variable value.  Use the LABEL statement to change the display of the variable name.		
and output.  - Create or update variables.  - Use the assignment statement to create character and numeric variables.  - Recall how to assign a date constant to a variable.  - Recognize SAS Functions.  - Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  - Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  - Use Truncation Functions: ROUND, INT.  - Use Descriptive Stats Functions: MEAN, SUM.  - Perform conditional processing.  - Use the IF-THEN and ELSE statements.  - Use the LENGTH statement for assigning byte size of character variables.  - Control the output of observations.  - Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  - Create an accumulating variable.  - Use the SUM statement.  - Use the SUM statement.  - Use By group processing with FIRST. and LAST to accumulate in groups.  - Explain the function of iterative DO loops.  - Assign permanent attributes.  - Use the FORMAT statement to change the display of the variable value.  - Use the LABEL statement to change the display of the variable name.		•
- Create or update variables.  • Use the assignment statement to create character and numeric variables.  • Recall how to assign a date constant to a variable.  - Recognize SAS Functions.  • Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  • Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  • Use Truncation Functions: ROUND, INT.  • Use Descriptive Stats Functions: MEAN, SUM.  - Perform conditional processing.  • Use the IF-THEN and ELSE statements.  • Use IF-THEN DO and ELSE DO statements.  • Use the LENGTH statement for assigning byte size of character variables.  - Control the output of observations.  • Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  - Create an accumulating variable.  • Use the SUM statement.  • Use BY group processing with FIRST. and LAST to accumulate in groups.  - Explain the function of iterative DO loops.  - Assign permanent attributes.  • Use the FORMAT statement to change the display of the variable value.  • Use the LABEL statement to change the display of the variable name.		
Use the assignment statement to create character and numeric variables. Recall how to assign a date constant to a variable. Recognize SAS Functions.  Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX. Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY. Use Truncation Functions: ROUND, INT. Use Descriptive Stats Functions: MEAN, SUM. Perform conditional processing.  Use the IF-THEN and ELSE statements. Use the IF-THEN DO and ELSE DO statements. Use the LENGTH statement for assigning byte size of character variables. Control the output of observations.  Use the OUTPUT statement to output to a specific data so Use the OUTPUT statement to control output timing. Create an accumulating variable.  Use BY group processing with FIRST. and LAST to accumulate in groups. Explain the function of iterative DO loops. Assign permanent attributes.  Use the FORMAT statement to change the display of the variable value. Use the LABEL statement to change the display of the variable name.		·
numeric variables.  Recall how to assign a date constant to a variable.  Recognize SAS Functions.  Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  Use Truncation Functions: ROUND, INT.  Use Descriptive Stats Functions: MEAN, SUM.  Perform conditional processing.  Use the IF-THEN and ELSE statements.  Use IF-THEN DO and ELSE DO statements.  Use the LENGTH statement for assigning byte size of character variables.  Control the output of observations.  Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  Create an accumulating variable.  Use the SUM statement.  Use BY group processing with FIRST. and LAST to accumulate in groups.  Explain the function of iterative DO loops.  Assign permanent attributes.  Use the FORMAT statement to change the display of the variable value.  Use the LABEL statement to change the display of the variable name.		- Create of update variables.
- Recognize SAS Functions.  • Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  • Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  • Use Truncation Functions: ROUND, INT.  • Use Descriptive Stats Functions: MEAN, SUM.  - Perform conditional processing.  • Use the IF-THEN and ELSE statements.  • Use IF-THEN DO and ELSE DO statements.  • Use the LENGTH statement for assigning byte size of character variables.  - Control the output of observations.  • Use the OUTPUT statement to output to a specific data sort use the OUTPUT statement to control output timing.  - Create an accumulating variable.  • Use the SUM statement.  • Use BY group processing with FIRST. and LAST to accumulate in groups.  - Explain the function of iterative DO loops.  - Assign permanent attributes.  • Use the FORMAT statement to change the display of the variable value.  • Use the LABEL statement to change the display of the variable name.		
Use Character Functions: UPCASE, PROPCASE, SUBSTR, SCAN, FIND, LENGTH, CATX.  Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  Use Truncation Functions: ROUND, INT.  Use Descriptive Stats Functions: MEAN, SUM.  Perform conditional processing.  Use the IF-THEN and ELSE statements.  Use the LENGTH statement for assigning byte size of character variables.  Control the output of observations.  Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  Create an accumulating variable.  Use the SUM statement.  Use BY group processing with FIRST. and LAST to accumulate in groups.  Explain the function of iterative DO loops.  Assign permanent attributes.  Use the FORMAT statement to change the display of the variable value.  Use the LABEL statement to change the display of the variable name.		<ul> <li>Recall how to assign a date constant to a variable.</li> </ul>
SCAN, FIND, LENGTH, CATX.  Use Date Functions: MONTH, DAY, YEAR, TODAY, MDY.  Use Truncation Functions: ROUND, INT.  Use Descriptive Stats Functions: MEAN, SUM.  Perform conditional processing.  Use the IF-THEN and ELSE statements.  Use IF-THEN DO and ELSE DO statements.  Use the LENGTH statement for assigning byte size of character variables.  Control the output of observations.  Use the OUTPUT statement to output to a specific data so use the OUTPUT statement to control output timing.  Create an accumulating variable.  Use the SUM statement.  Use By group processing with FIRST. and LAST to accumulate in groups.  Explain the function of iterative DO loops.  Assign permanent attributes.  Use the FORMAT statement to change the display of the variable value.  Use the LABEL statement to change the display of the variable name.		- Recognize SAS Functions.

<ul> <li>Using the DATA Step to Manipulate Data</li> <li>Use the LENGTH statement for assigning byte size of character variables.</li> <li>Control the output of observations.</li> <li>Use the OUTPUT statement to output to a specific data set.</li> <li>Use the OUTPUT statement to control output timing.</li> <li>Create an accumulating variable.</li> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		- Perform conditional processing.
<ul> <li>Using the DATA Step to Manipulate Data</li> <li>Use the LENGTH statement for assigning byte size of character variables.</li> <li>Control the output of observations.</li> <li>Use the OUTPUT statement to output to a specific data set.</li> <li>Use the OUTPUT statement to control output timing.</li> <li>Create an accumulating variable.</li> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		Use the IF-THEN and ELSE statements.
<ul> <li>Use the LENGTH statement for assigning byte size of character variables.</li> <li>Control the output of observations.</li> <li>Use the OUTPUT statement to output to a specific data so Use the OUTPUT statement to control output timing.</li> <li>Create an accumulating variable.</li> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		
<ul> <li>Control the output of observations.</li> <li>Use the OUTPUT statement to output to a specific data so the OUTPUT statement to control output timing.</li> <li>Create an accumulating variable.</li> <li>Use the SUM statement.</li> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>	Step to	<ul> <li>Use the LENGTH statement for assigning byte size of</li> </ul>
<ul> <li>Use the OUTPUT statement to control output timing.</li> <li>Create an accumulating variable.</li> <li>Use the SUM statement.</li> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		- Control the output of observations.
<ul> <li>Use the OUTPUT statement to control output timing.</li> <li>Create an accumulating variable.</li> <li>Use the SUM statement.</li> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		<ul> <li>Use the OUTPUT statement to output to a specific data set.</li> </ul>
<ul> <li>Use the SUM statement.</li> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		·
<ul> <li>Use BY group processing with FIRST. and LAST to accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		- Create an accumulating variable.
<ul> <li>accumulate in groups.</li> <li>Explain the function of iterative DO loops.</li> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		Use the SUM statement.
<ul> <li>Assign permanent attributes.</li> <li>Use the FORMAT statement to change the display of the variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		
<ul> <li>variable value.</li> <li>Use the LABEL statement to change the display of the variable name.</li> </ul>		·
variable name.		
- Use PROC PRINT to generate a detail report.		
		- Use PROC PRINT to generate a detail report.
Generate Reports Using PROC Steps  • Use the LABEL option and NOOBS options to enhance the report.	Reports Using	<ul> <li>Use the LABEL option and NOOBS options to enhance the report.</li> </ul>
. Red Steps		<ul> <li>Use the VAR statement to control the display of variables.</li> </ul>

Objective	Details
	- Use PROC MEANS to generate a summary report.
	<ul> <li>Use the MAXDEC= option to control the display of decimal places.</li> <li>Use VAR and CLASS statements to control the structure of the report.</li> </ul>
	- Use PROC FREQ to generate a frequency report.
	Use the ORDER=option to control the order of the rows of the report.
	<ul> <li>Use the TABLES statement for one-way and two-way tables.</li> </ul>
	<ul> <li>Use the NOCUM and NOPERCENT options in a one-way table.</li> </ul>
	<ul> <li>Use the CROSSLIST option to control the layout of two-way tables.</li> </ul>
	- Identify methods to enhance reports.
	Use TITLE statement.
	Use FOOTNOTE statement.
	<ul> <li>Use FORMAT statement for temporary attributes.</li> </ul>
	<ul> <li>Use the LABEL statement for temporary attributes.</li> </ul>
	<ul> <li>Use the WHERE statement for subsetting observations.</li> </ul>
	- Use PROC SORT to sort a report based on values of a variable.
Use Utility Procedures	<ul> <li>Use the OUT= option to create an output data set that contains the data in sorted order.</li> </ul>
	<ul> <li>Use the BY statement to specify the variable(s) whose values are used to sort the data.</li> </ul>
	<ul> <li>Use the DESCENDING option with the BY statement to sort options in descending order.</li> </ul>
	- Use PROC FORMAT to define custom formats.
	Use the VALUE statement to display one or more values.
	Use the keyword OTHER to label missing values.
Import and Export non-SAS files	- Use a procedure to transfer a CSV file.
	<ul> <li>Use PROC IMPORT to import a CSV file.</li> </ul>
	<ul> <li>Use the PROC EXPORT to export to a CSV file.</li> </ul>
	- Use the LIBNAME statement to import/export an Excel file with
	XLSX engine Use ODS to direct reports to external files.
	Use the destinations of PDF, RTF, EXCEL.
	<ul> <li>Use the options of FILE= and STYLE=.</li> </ul>

## SAS A00-215 Sample Questions:

#### **Question: 1**

Which two statements are true regarding the KEEP and DROP statements?

(Choose two.)

- a) They can be placed anywhere in the DATA step.
- b) They affect all data sets that are being created.
- c) They can be used in PROC steps.
- d) They control the order of the variables in the output data set.

Answer: a, b

#### Question: 2

Which statement is true about the code shown below?

data revenue; merge sales(in=sold) stock; by productID; if sold; run;

- a) Only columns from sales are in revenue.
- b) Only rows with information from sales are in revenue.
- c) Only columns from stock are in revenue.
- d) Only rows with information from stock are in revenue.

Answer: b

#### **Question: 3**

What is the value of x2 in the NUMS data set?

data nums; x=7.56; x2=int(x);

run;

- a) 7.5
- b) 7
- c) 8
- d) 7.56

Answer: b

#### **Question: 4**

Given the SAS log shown below:

199 dat students;

---

14

WARNING 14-169: Assuming the symbol DATA was misspelled as dat.

200 set sashelp.class;

201 ratio=height/weight;

202 run;

NOTE: There were 19 observations read from the data set SASHELP.CLASS.

NOTE: The data set WORK.STUDENTS has 19 observations and 6 variables.

203

204 proc means data=students;

205 class sex;

206 var ratio;

207 run;

NOTE: There were 19 observations read from the data set WORK.STUDENTS.

Which statement is true?

- a) The PROC MEANS step failed.
- b) The DATA step failed.
- c) The DATA step and PROC MEANS step executed.
- d) The program stopped processing after the DATA step.

Answer: c

#### **Question: 5**

Given the program below:

data strings; str="What day is it?"; pos=find(str,'day'); run;

What numeric value is assigned to the variable pos when the program executes? \_\_\_

Enter your numeric answer in the space above.

- a) 6
- b) 4
- c) 2
- d) 8

Answer: a

#### **Question: 6**

Which statement is true regarding variable names?

- a) Variable names are from 1 to 64 characters in length.
- b) Variable names must be in all lower case.
- c) Variable names can start with a number.
- d) Variable names can end with a number.

Answer: d

#### **Question: 7**

Which two actions occur during the execution phase?

(Choose two.)

- a) An observation from the input data set is read into the PDV.
- b) The descriptor portion is created.
- c) The PDV is initialized.
- d) The program is checked for syntax errors.

Answer: a, c

#### **Question: 8**

Given the SAS program shown below:

```
title1 "Last Year's Standings";
title2 "Excludes preseason";
proc print data=football;
run;
title1;
title2 "Includes preseason";
proc print data=football2;
run;
```

What title appears on the second PROC PRINT report?

- a) Last Year's Standings Includes preseason
- b) Last Year's Standings Excludes preseason
- c) "This line is blank." Includes preseason
- d) "This line is blank." Excludes preseason

Answer: c

#### **Question: 9**

Which statement is true regarding PROC IMPORT?

- a) By default, PROC IMPORT overwrites an existing SAS data set.
- b) PROC IMPORT writes SAS data to a CSV file.
- c) Dates are imported as character values.
- d) The DBMS= option identifies the type of data to import.

Answer: d

#### **Question: 10**

Which ends a step?

- a) a RUN statement
- b) an END statement
- c) an ENDSTEP statement
- d) a semicolon

Answer: a

# Study Guide to Crack SAS Programming Fundamentals A00-215 Exam:

- Getting details of the A00-215 syllabus, is the first step of a study plan.
   This pdf is going to be of ultimate help. Completion of the syllabus is must to pass the A00-215 exam.
- Making a schedule is vital. A structured method of preparation leads to success. A candidate must plan his schedule and follow it rigorously to attain success.
- Joining the SAS provided training for A00-215 exam could be of much help. If there is specific training for the exam, you can discover it from the link above.
- Read from the A00-215 sample questions to gain your idea about the actual exam questions. In this PDF useful sample questions are provided to make your exam preparation easy.
- Practicing on A00-215 practice tests is must. Continuous practice will make you an expert in all syllabus areas.

#### Reliable Online Practice Test for A00-215 Certification

Make AnalyticsExam.Com your best friend during your SAS Certified Associate - Programming Fundamentals Using SAS 9.4 exam preparation. We provide authentic practice tests for the A00-215 exam. Experts design these online practice tests, so we can offer you an exclusive experience of taking the actual A00-215 exam. We guarantee you 100% success in your first exam attempt if you continue practicing regularly. Don't bother if you don't get 100% marks in initial practice exam attempts. Just utilize the result section to know your strengths and weaknesses and prepare according to that until you get 100% with our practice tests. Our evaluation makes you confident, and you can score high in the A00-215 exam.

#### Start Online Practice of A00-215 Exam by Visiting URL
