Identity and Access Management Architect Syllabus:

Section	Objectives	Weight
Identity Management Concepts	- Describe common authentication patterns and understand the differences between each one. - Describe the building blocks that are part of an identity solution (authentication, authorization, & accountability) and how you enable those building blocks using Salesforce features. - Describe how trust is established between two systems. - Given a scenario, recommend the appropriate method for provisioning users in Salesforce. - Given a scenario, troubleshoot common points of failure that may be encountered in a single sign-on solution (SAML, OAuth, etc.)	**17%**
Accepting Third-Party Identity in Salesforce	- Given a use case, describe when Salesforce is used as a Service Provider. - Given a scenario, recommend the most appropriate way to provision users from identity stores in B2E and B2C scenarios. - Given a scenario, recommend the appropriate authentication mechanism when Salesforce needs to accept 3rd Party Identity (Enterprise Directory, Social, Community, etc.). - Given a scenario, identify the ways that users can be provisioned in Salesforce to enable SSO and apply access rights. - Given a scenario, identify the auditing and monitoring approaches available on the platform, and describe the tools that are available to diagnose IdP issues.	**21%**
Salesforce as an Identity Provider	- Given a scenario, identify the most appropriate OAuth flow (Web based, JWT, User agent, Device auth flow). - Given a scenario, recommend appropriate Scope and Configuration of the connected App for Authorization. - Describe the various implementation concepts of OAuth (scopes, secrets, tokens, refresh tokens, token expiration, token revocation, etc.). - Given a scenario, recommend the Salesforce technologies that should be used to provide identity to the 3rd party system. (Canvas, Connected Apps, App Launcher, etc.).	**17%**
Access Management Best Practices	- Given a set of requirements, determine the most appropriate methods of multi-factor authentication to use, and the right type of session they should yield. - Given a scenario, how should you best assign roles, profiles, and permission sets to a user	**15%**

Section	Objectives	Weight
	during the SSO process, how would you keep these assignments up to date. - Given a scenario, describe what tools you can apply to audit and verify the activity/user during and after login. - Given a scenario, identify the configuration settings for a Connected app.	
Salesforce Identity	- Given a set of requirements, identify the role Identity Connect product plays in a Salesforce Identity implementation. - Given a scenario identify if Salesforce Customer 360 Identity fits into a fully developed Customer 360 solution. - Give a set of requirements, recommend the most appropriate Salesforce license type(s).	12%
Community (Partner and Customer)	- Describe the capabilities for customizing the user experience for Experience Cloud (Branding options, authentication options, identity verification self-registration, communications, password reset etc.). - Given a set of requirements, determine the best way to support external identity providers in communities and leverage the right user/contact model to support community user experience. - Given a requirement, understand the advantages and limitations of External Identity solutions and associated licenses. - Given a scenario, determine when to use embedded login.	18%

Salesforce Identity and Access Management Architect Sample Questions:

Question: 1

Which three different attributes can be used to identify the user in a SAML 65> assertion when Salesforce is acting as a Service Provider?

Choose 3 answers

a) Federation ID
b) Salesforce User ID
c) User Full Name
d) User Email Address
e) Salesforce Username

Answer: a, c, d

Question: 2

Northern Trail Outfitters (NTO) is planning to implement a community for its customers using Salesforce Experience Cloud . Customers are not able to self-register. NTO would like to have customers set their own passwords when provided access to the community.

Which two recommendations should an identity architect make to fulfill this requirement?

Choose 2 answers

a) Add customers as contacts and add them to Experience Cloud site.
b) Enable Welcome emails while configuring the Experience Cloud site.
c) Allow Password reset using the API to update Experience Cloud site membership.
d) Use Login Flows to allow users to reset password in Experience Cloud site.

Answer: c, d

Question: 3

Under which scenario Web Server flow will be used?

a) Used for web applications when server-side code needs to interact with APIS.
b) Used for server-side components when page needs to be rendered.
c) Used for mobile applications and testing legacy Integrations.
d) Used for verifying Access protected resources.

Answer: a

Question: 4

In a typical SSL setup involving a trusted party and trusting party, what consideration should an Architect take into account when using digital certificates?

a) Use of self-signed certificate leads to lower maintenance for trusted party because multiple selfsigned certs need to be maintained.
b) Use of self-signed certificate leads to higher maintenance for trusted party because they have to act as the trusted CA.
c) Use of self-signed certificate leads to higher maintenance for trusting party because the cert needs to be added to their truststore.
d) Use of self-signed certificate leads to lower maintenance for trusting party because there is no trusted CA cert to maintain.

Answer: d

Question: 5

A client is planning to rollout multi-factor authentication (MFA) to its internal employees and wants to understand which authentication and verification methods meet the Salesforce criteria for secure authentication. Which three functions meet the Salesforce criteria for secure mfa?

Choose 3 answers

   a) username and password + SMS passcode
   b) Username and password + secunty key
   c) Third-party single sign-on with Mobile Authenticator app
   d) Certificate-based Authentication
   e) Lightning Login

Answer: b, c, e

Question: 6

Customer service representatives at Universal containers (UC) are complaining that whenever they click on links to case records and are asked to login with SAML SSO, they are being redirected to the salesforce home tab and not the specific case record.

What item should an architect advise the identity team at UC to investigate first?

   a) My domain is configured and active within salesforce.
   b) The salesforce SSO settings are using http post
   c) The identity provider is correctly preserving the Relay state
   d) The users have the correct Federation ID within salesforce.

Answer: c

Question: 7

How should an Architect automatically redirect users to the login page of the external Identity provider when using an SP-Initiated SAML flow with Salesforce as a Service Provider?

   a) Use visualforce as the landing page for My Domain to redirect users to the Identity Provider login Page.
   b) Enable the Redirect to the Identity Provider setting under Authentication Services on the My domain Configuration.
   c) Remove the Login page from the list of Authentication Services on the My Domain configuration.
   d) Set the Identity Provider as default and enable the Redirect to the Identity Provider setting on the SAML Configuration.

Answer: c

Question: 8

When designing a multi-branded Customer Identity and Access Management solution on the Salesforce Platform, how should an identity architect ensure a specific brand experience in Salesforce is presented?

a) Provide a brand picker that the end user can use to select its sub-brand when they arrive on salesforce.
b) The Experience ID, which can be included in OAuth/Open ID flows and Security Assertion Markup Language (SAML) flows as a URL parameter.
c) Add a custom parameter to the service provider's OAuth/SAML call and implement logic on its login page to apply branding based on the parameters value.
d) The Audience ID, which can be set in a shared cookie.

Answer: b

Question: 9

What are three capabilities of Delegated Authentication?

Choose 3 answers

a) It can be assigned by Custom Permissions.
b) It can connect to SOAP services.
c) It can be assigned by Permission Sets.
d) It can be assigned by Profiles.
e) It can connect to REST services.

Answer: b, c, e

Question: 10

A financial services company uses Salesforce and has a compliance requirement to track information about devices from which users log in. Also, a Salesforce Security Administrator needs to have the ability to revoke the device from which users log in. What should be used to fulfill this requirement?

a) Use the Activations feature to meet the compliance requirement to track device information.
b) Use the Login History object to track information about devices from which users log in.
c) Use Login Flows to capture device from which users log in and store device and user information in a custom object.
d) Use multi-factor authentication (MFA) to meet the compliance requirement to track device information.

Answer: a
