Sample Questions:

Question: 1

When you publish a web service using the Policy Manager, you use the Publish Web API wizard to publish an API and:

- a) non-SOAP applications.
- b) RESTful proxies only.
- c) existing WSDL documents.
- d) web services that require the generation of a new WSDL document.

Answer: a

Question: 2

When you build a RESTful policy, you can use an assertion that can take a single-valued input and convert it to a multi-valued context variable that can be accessed later in the policy.

Which assertion enables you to do this?

- a) Join Variable
- b) Split Variable
- c) Look up Context Variable
- d) Manipulate Multivalued Variable

Answer: b

Question: 3

You are required to authenticate a user through HTTP Basic Authentication and to ensure that the user is a member of at least one of three different groups. Which assertion or sequence of assertions should you use?

- a) Require HTTP Basic Credentials, specifying the list of groups as attributes of the assertion
- b) Three separate Authenticate User or Group assertions inside an At Least One Assertion Must Evaluate to True folder
- c) Require HTTP Basic Credentials and three separate Authenticate User or Group assertions inside an At Least One Assertion Must Evaluate to True folder
- d) Three separate Authenticate User or Group assertions inside an At Least One Assertion Must Evaluate to True folder and the Require HTTP Basic Credentials assertion

Answer: c

Question: 4

Before you install the CA Mobile API Gateway (MAG), it is important to understand the network zones you will use. Your implementation will use an Internal zone and a DMZ zone.

The zones appear in the Policy Manager. The DMZ zone contains external-facing endpoints and handles user requests coming from the SDK.

What is this zone responsible for?

(Choose three)

- a) MAG Manager
- b) OAuth test clients
- c) Mobile Single Sign-On (Mobile SSO) protocols
- d) Touchless login using quick response (QR) codes

Answer: a, c, d

Question: 5

All OAuth Toolkit (OTK) features are implemented using policies in the Policy Manager. With the Policy Manager, you can customize specific policies. What are some examples of customization?

(Choose two)

- a) Adding new client keys
- b) Changing token lifetimes
- c) Configuring trusted applications groups
- d) Updating policies to support Oracle database

Answer: b, d

Question: 6

Which feature characterizes the CA Mobile API Gateway (MAG) enterprise browser?

- a) It displays a trusted group of enterprise-approved applications on a device.
- b) It enables API developers to grant or deny access to protected APIs based on the physical location of the application user.
- c) It displays a list of WebSocket clients and servers that CA API Gateway can communicate with for inbound and outbound messages.
- d) It enables developers to configure the MAG to communicate with the Apple Push Notification (APN) service and the Apple Feedback service

Answer: a

Question: 7

Folders are useful for organizing your services and policies. Which statements about folders are TRUE?

(Choose two)

- a) Only a user with the administrator role can create folders.
- b) The Update Folder role provides the ability to read the update services or policies within the folder.
- c) The Manage Folder role allows a user to create, read, update, and delete services or policies within the folder.
- d) Folders can be placed into zones, which will enable a user with the corresponding Manage X Zone role to manage folders that are in the X zone.

Answer: c, d

Question: 8

In which circumstance do you typically use the Gateway Migration Utility (GMU)?

- a) When you need to clone an entire Gateway
- b) When you need to migrate policies, services, or entities
- c) When you need to migrate system files such as system.properties or host.properties
- d) When you need to configure Command Line Policy Migration Tool (CMT) mappings using a web browser interface

Answer: b

Question: 9

The CA API Gateway virtual appliance is delivered as an open virtual appliance (OVA) file. What does the OVA file contain?

(Choose three)

- a) VMware Player
- b) A 64-bit Linux OS
- c) SQL Server 2014 Express
- d) A MySQL enterprise database
- e) The latest Java Development Kit (JDK)

Answer: b, d, e

Question: 10

Why might you use an Evaluate Request XPath assertion?

(Choose two)

- a) To validate an X.509 certificate context variable
- b) To break a policy into different paths for different types of operations
- c) To help provide preferential routing to unique customers with special considerations
- d) To check that HTML form fields appear a minimum number of times or do not appear more than once

Answer: b, c
