### Question: 1

Which session flag indicates the ID of the matching SD-WAN member?

- a) serial
- b) sdwan\_service\_id
- c) sdwan\_mbr\_seq
- d) policy\_id

**Answer: c**

### Question: 2

What does forward error correction do?

- a) It sends the same packets across multiple links.
- b) It buffers packets and transmits them at the appropriate speed.
- c) It reorders packets at the destination.
- d) It generates parity packets with redundant data.

**Answer: d**

**Question: 3**

In a spoke IPsec phase 1 configuration, which setting must be enabled in order for the spoke to participate in ADVPN?

- a) auto-discovery-sender
- b) auto-discovery-receiver
- c) auto-discovery-shortcuts
- d) auto-discovery-forwarder

**Answer: b****Question: 4**

If the outgoing interface for an established SNATed session changes, which two requirements must the configuration meet so that FortiGate continues forwarding packets from that session to the new outgoing interface? (Choose two.)

- a) You must have a firewall policy that accepts the new traffic flow for the session.
- b) You must configure FortiGate so the SNAT IP address doesn't change.
- c) You must enable the snat-route-change setting.
- d) You must set firewall-session-dirty to check-new on the new matching firewall policy.
