Atlassian ACP-520 Syllabus:

Topic	Details
Atlassian Organizations - 35-45%	
Create and manage an organization	- Understand the purpose and structure of an Atlassian organization - Create a new organization, site, and product

Topic	Details
	- Identify default and optional configurations based on selections made during signup
Manage multiple sites and products	- Create a new product and site under an existing organization - Understand the nuances of multiple sites and products - Understand site URLs and product URLs - Transfer products to another organization - Set landing product for a site
Manage product access	- Understand the available methods to grant product access - Understand the site access settings that control how users get access to your site - Configure approved domains - Configure invitation links - Configure user invites
Manage access requests	- Understand when users request access • Product access requests must be made by a user with a verified email address and Atlassian account • You can approve or deny these requests on the Access requests page • Users can only use this feature to access your site or products if you choose to approve them - Understand that • When you grant a user access to a product, they're added to the default group for that product group (which may be the default group for other products, as well) and billing starts for the new user • When you deny a user access to a product, you can send them a short message explaining why. • A user who has requested access and been denied won't be able to request access again.

Topic	Details
Manage product subscriptions & billing	- Understand how to view, switch, and cancel product subscription plans - Understand how billable users are calculated - Understand how to manage your bill
Users and Groups - 25-35%	
Manage users	- Understand managed and non-managed accounts - Grant access to products via product roles - Prompt reset password - Suspend and restore access - Remove user - Log in as user
Create and administer managed accounts	- Understand what managed accounts are: • Some or all of the Atlassian accounts with email addresses from your verified domain(s) • Managed accounts give you the most security and access control over a company's use of Atlassian products - Verify a domain either through HTTPS or DNS TXT - Understand where to access them under Directory > Managed accounts - Understand rules for managed and un-managed accounts - View a managed user account - Edit a managed account - Deactivate a managed account - Delete a managed account
Manage groups	- Define default product access groups - Understand the configuration choices for default access groups - Rules for default access groups - Purpose and rules for site-admins group
Analyze and troubleshoot changes to users and groups	- Understand the impact to an organization's products when various directory changes are made • Delete groups

Topic	Details
	• Suspend access, restore access, remove user • Deactivate and delete managed accounts - Analyze and troubleshoot the impact of user and group changes within Jira family of products and within Confluence
Admin Roles - 10-15%	
Distinguish admin roles	- Recall the following five admin roles: org admins, Jira product admins, Jira project admins, Confluence product admins, and Confluence space admins - Understand and distinguish between the roles based on the product features they use and the tasks they perform
Grant appropriate admin privileges	- Grant and revoke the org admin role - Grant and revoke the product admin role for Jira Administration and Confluence
Advanced features - 15-20%	
Configure custom email addresses	- Add custom email addresses for product notifications - Understand the purpose of adding a custom email address
Configure Premium features	- Configure Release Tracks - Configure Sandboxes - Configure IP allowlisting - Use admin insights
Configure advanced features	- Configure admin APIs • Understand that you can manage your Atlassian cloud organization via the admin APIs • Create an API key • Revoke an API key - Configure application tunnels • Understand what application tunnels are 1. Provide a secure pathway between a cloud

Topic	Details
	organization and DC /Server instances that live on the company network 2. Used to integrate products through application links that would otherwise require allowing incoming connections to the company network 3. Allow integration of Atlassian products and exchange of data and functionalities in a secure way, without exposing the company network or allowlisting incoming connections or IPs • View and manage data residency
Understand Atlassian Access	- Understand what is Atlassian Access (included in the Enterprise plan or purchased as a subscription on other plans) - Understand that you can connect your identity provider to your Atlassian organization for single sign-on, user sync, and provisioning - Understand how Shadow IT sites are created - Understand how to revoke a user's API tokens

Broaden Your Knowledge with Atlassian ACP-520 Sample Questions:

Question: 1

Understanding Shadow IT risks is crucial. What strategy does Atlassian Access offer to mitigate these risks?

- It automatically deletes any unauthorized products or sites created without IT approval.
- It provides visibility and control over all Atlassian products, including unauthorized sites.
- It restricts users from creating new Atlassian products or sites.
- It offers unlimited storage to discourage the creation of Shadow IT sites.

Answer: b

Question: 2

Which of the following are true when you create a new product and site under an existing organization? (Select two)

- a) The new site inherits global permissions from the organization automatically.
- b) Each new site requires a unique URL.
- c) The new product can share a site with other products.
- d) A new organization is created for each new product.

Answer: b, c

Question: 3

In the context of an Atlassian organization, what is the best practice for managing users across multiple sites and products?

- a) Assign users to global roles that apply across all sites and products.
- b) Manage users individually for each site to maintain strict access control.
- c) Utilize groups to manage user access across multiple sites, streamlining permission management.
- d) Require each user to maintain separate accounts for each site for security reasons.

Answer: c

Question: 4

How does managing multiple sites and products within an Atlassian organization affect user access? (Select two)

- a) Users need separate accounts for each site.
- b) Users can be grouped across multiple sites for easier management.
- c) Access to products is managed separately from site access.
- d) A single login can provide access to all products and sites within the organization.

Answer: b, d

Question: 5

If you deny a user's access request to a product, how can you communicate the reason to them?

- a) By sending a personalized email outside of Atlassian
- b) Through a phone call
- c) You can send them a short message via the denial notification.
- d) It's not possible to communicate the reason.

Answer: c

Question: 6

Which of the following statements are true regarding users and groups in Atlassian products?

(Select two)

- a) Users can belong to multiple groups
- b) Groups are used to manage project roles exclusively
- c) Users can be given access to products based on the groups they belong to
- d) A user's group membership can override their individual permissions

Answer: a, c

Question: 7

When configuring invitation links for product access, which of the following options is available?

- a) Links can be set to never expire until they are manually deactivated.
- b) Invitation links expire after a single use.
- c) Each user can use the same link to invite additional users.
- d) Invitation links provide access to all Atlassian products by default.

Answer: a

Question: 8

What is the primary purpose of an Atlassian Organization?

- a) To manage billing for all Atlassian products
- b) To provide a centralized space for managing users and permissions across Atlassian products
- c) To track project progress across teams
- d) To customize user interfaces for individual Atlassian products

Answer: b

Question: 9

Where can you manage and respond to product access requests in Atlassian?

- a) In the product dashboard
- b) On the Access requests page
- c) Within the user's profile settings
- d) Through email notifications only

Answer: b

Question: 10

How can an organization admin enforce security policies across their Atlassian products?

- a) By enabling SAML single sign-on
- b) By setting up a VPN
- c) By customizing the dashboard for all users
- d) By manually configuring permissions for each user

Answer: a
