# Copado Consultant Sample Questions:

## Question: 1

What are two best practices when managing Copado Org Credentials for sandbox environments?

(Select two)

- a) Reuse credentials across environments for consistency
- b) Assign credentials to named users, not generic admin users
- c) Regularly rotate credentials to align with security policies
- d) Share credentials using Chatter to enable collaboration

**Answer: b, c**

## Question: 2

In a standard Copado branching strategy, what does the 'Environment Branch' represent?

- a) The metadata backup directory
- b) The physical sandbox
- c) A Git branch that mirrors metadata in a specific org
- d) The test coverage threshold

**Answer: c**

## Question: 3

What are two key advantages of using feature branches in Copado?

(Select two)

- a) Promotes parallel development with reduced conflict
- b) Removes need for Apex test coverage
- c) Enables story-specific metadata tracking
- d) Bypasses the need for Git commits

**Answer: a, c**

## Question: 4

Where can users find up-to-date documentation and support resources for Copado installation and configuration?

- a) Salesforce Trailhead
- b) GitHub Wiki
- c) Copado Success Community
- d) AppExchange Listing

**Answer: c**

**Question: 5**

What is the primary purpose of Copado's Metadata Deployment Process during initial setup?

- a) Sync metadata from Copado to Salesforce
- b) Enable record types in the sandbox
- c) Push metadata changes directly to GitHub
- d) Promote metadata from one org to another using version control

**Answer: d**

**Question: 6**

Which two conditions must be satisfied before using Copado Webhooks to communicate with an external system?

(Select two)

- a) The external system must support authentication via Copado OAuth
- b) The endpoint must be publicly accessible over the internet
- c) The receiving system must be a Salesforce org
- d) The endpoint must be able to process JSON-formatted payloads

**Answer: b, d**

**Question: 7**

Why should organizations implement governance over Copado pipelines and credentials?

- a) To reduce licensing cost
- b) To control who can perform sensitive actions and to align with security policies
- c) To prevent metadata from being lost during deployments
- d) To allow anonymous promotions between orgs

**Answer: b**

**Question: 8**

Which two scenarios illustrate proper governance in a Copado-enabled enterprise environment?

(Select two)

- a) Enforcing branch naming conventions
- b) Setting up approval gates for production promotions
- c) Allowing all developers to promote directly to production
- d) Letting each developer connect their personal Git repo

**Answer: a, b**

**Question: 9**

During the Go Live phase of a Copado implementation, what is a critical success factor?

- a) Ensuring rollback and recovery mechanisms are in place
- b) Promoting all metadata directly from developer sandbox to production
- c) Disabling version control to streamline deployment
- d) Removing all user access from the QA sandbox

**Answer: a**

**Question: 10**

Which two of the following are configuration steps needed to integrate Jira with Copado successfully?

(Select two)

- a) Set up OAuth or token-based authentication
- b) Configure pipeline stages for deployments
- c) Enable Slack notifications in the org
- d) Map Jira fields to Copado User Story fields

**Answer: a, d**
